

BIT-BITER™

General Description

One small drop of BIT-BITER multiplies friction between a slipping driver and that of the fastener head, creating a grip that won't give up during installation. A light coating of BIT-BITER makes otherwise stripped or damaged fasteners or drivers workable again.

Don't let your job be held up by worn, cammed out, rounded or deformed fasteners and drivers. No tool box is complete without it.

Key Features

- SAVES MONEY- This time saving product allows for fast removal and replacement of parts with minimal effort. No need for easy-outs, screw extractors, drilling out or re-tapping; BIT-BITER and your standard driver is all that is needed. Works well with screw drivers, hex/Allen wrenches, sockets, pliers, wrenches and most gripping tools.
- PROTECTS-By providing terrific grip between the fastener and driver, BIT-BITER prevents damage to surfaces and injury from a slipped driver.
- CLEAN UP/ENVIRONMENTALLY FRIENDLY- Non-toxic, non-corrosive, non-staining, odourless. Material can be easily washed away with water.
- UNLIMITED SHELF LIFE- This product can be stored indefinitely without loosening its effectiveness.

Instructions for Use

Simply apply BIT-BITER™ to the head of the fastener, tip of the driver or the gripping surface of the tool being used. Works instantly.

Storage

Applied product has an indefinite shelf life but it is advised that the parts be stored out of direct sunlight. 1 bottle of BIT-BITER™ £12.00 inc VAT
